

Granting permission for BPL to be licensed in the low frequencies which we all know will cause major interference to ALL public & private radio services in the HF & low VHF bands falls under the following:

Subpart B--Station Operation Standards

§97.101 General standards.

(d) No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal.

We as Amateur Radio operators cannot willfully or maliciously cause interference to any radio signal. How can the FCC allow BPL when they know it will cause interference if it is licensed on the low frequencies they are requesting? Looks like the FCC would be causing malicious & willfull interference by proceeding with this knowing what the consequences would be if they do!!!!
